Profile

Backend Developer with **1+ year of hands-on experience** building **scalable RESTful APIs, secure backend services, and optimized database systems**. Skilled in **Node.js, Express.js, TypeScript, MySQL, MongoDB, Prisma**, and **Mongoose ORM**, with practical experience in database schema design, relational and document-based data modeling, and API performance optimization. Experienced in integrating AI and third-party APIs, including ChatGPT and Gemini, into backend applications. Focused on writing clean, maintainable server-side code and continuously improving in scalable backend architecture.

Education

Adama Science and Technology University, school of Computer Science and Engineering
Relevant Coursework:
Data Mining, Machine Learning, Web Development, Data Structures & Algorithms,
Distributed Systems, Database Systems, Software Engineering, Object-Oriented
Programming, Artificial Intelligence, Computer Networks

06/2021 – 06/2025
Adama,Ethiopia

Professional Experience

Back-End Developer And Machine Learning Engineer, Green value Groups
• Built interactive web apps using React and Next.js with REST APIs in Node.js (Express).
• Worked with PostgreSQL, MySQL, MongoDB using Prisma and Drizzle for schema design and queries.
• Integrated ML models into backend services and exposed them to frontend features.
• Used Docker and GitHub Actions for CI/CD and deployment of full-stack applications.

08/2025 – 04/2026
Addis Ababa Ethiopia

Front-End Developer intern, Madda Walabu University
• Developed responsive web interfaces using React and TypeScript, collaborating with backend teams to consume REST APIs and ensure reliable data flows.
• Participated in integration testing between frontend applications and existing university systems, focusing on correctness and performance of data exchange.

07/2024 – 09/2024
Bale Robe,Ethiopia

Certificates

Introduction to Programming – 5 Million Ethiopian Coders Program Udacity | Issued June August 2024
• Completed coursework covering Python, HTML, CSS, and JavaScript fundamentals.
• Gained practical skills in writing basic programs, building simple web pages, and understanding programming logic and problem-solving.

Kifiya AI Mastery Training Program
• Gained hands-on experience with Python, SQL, data warehousing, dbt/DVC/MLflow, Docker, CI/CD, and time-series/predictive modeling.
• Built end-to-end, production-oriented AI solutions, including Generative AI applications (RAG, chatbots, LLM fine-tuning and evaluation) under real deadlines and team workflows.

Python for Data Science, AI & Development
IBM – Coursera | Issued June 2024 • Completed coursework covering Python basics, data structures, web scraping, APIs, and data analysis techniques.
• Gained hands-on skills in writing Python programs, manipulating data with Pandas, and integrating Python in AI workflows.

Skills And Tools

Back End — Competent
• Node.js,Express
• RESTful API design, authentication, API integration, integration testing between frontend and legacy APIs.

Databases — Competent
PostgreSQL, MySQL, MongoDB, Redis (Session Management & Caching)

LLM Integration — Proficient
OpenAI GPT APIs, LangChain,Gemini APIs

Tools — Expert
Git, GitHub, VS Code, Google Colab, Jupyter Notebook

Projects

Ethiopian Clinic Appointment System,

A multi-service backend architecture built to streamline healthcare scheduling and provider management.

- Designed and implemented an isolated multi-service backend architecture consisting of a dedicated user-service, clinic-service and Appointment-service to optimize separation of concerns.
- Developed robust slot controllers and complex patient detail schemas with Mongoose, enforcing strict data validation for real-world booking flows.
- Optimized session management and application performance by integrating a high-speed **Redis** caching layer.
- Successfully managed end-to-end cloud deployment processes to **Render**, configuring environment variables, database access controls, and CORS policies.
- *Tech Stack:* Node.js, Express.js, MongoDB, Mongoose ORM, Redis, Render.

Weg Blog,

A full-featured social blogging platform built to handle complex database relations and real-time interactions.

- Engineered a decoupled, modular MVC architecture supporting advanced relational patterns like follower systems, likes, and nested comments.
- Implemented a high-performance **cursor-based pagination** system for infinite scrolling, drastically lowering database overhead and network payload size compared to standard offset pagination.
- *Tech Stack:* Node.js, Express.js, MongoDB, Mongoose, Git.

Task Tracker web Application, *A web application built to streamline daily productivity and process management.*

- Engineered a clean, lightweight RESTful API using **Express.js** and **Node.js** to manage task creation, deletion, and lifecycle tracking.
- Established reliable data persistence and schema validation using **MongoDB**.
- Managed cross-platform deployment, leveraging **Vercel** and **Render** to host the fully operational full-stack application.
- *Tech Stack:* Node.js, Express.js, MongoDB, Vercel, Render.

Crowdsourced Disaster Response Platform

- Developed an image classification model to identify disaster types (fire, flood, drought) from user-uploaded images.
- Deployed the model on Hugging Face and integrated it with Flutter (mobile) and React (web) platforms for real-time verification.
